

Accretion potential of species and Colony morphology	Species richness	Before 1990s		Species richness	2019	
		RF	HG		RF	HG
Key_Spp.						
Massive: <i>Colpophyllia natans</i> , <i>Diploria labyrinthiformis</i> , <i>Montastraea cavernosa</i> , <i>M. annularis</i> spp. Complex <i>(Orbicella faveolata, O. annularis)</i> , <i>Pseudodiploria. strigosa</i> , <i>Siderastrea siderea</i> .	4	11	26	7	78	253
Branching: <i>Acropora palmata</i> , <i>A. cervicornis</i> , <i>A. prolifera</i>	2	16	5	3	15	5
Non- accretional Spp.						
Small massive: <i>Solenastrea bournoni</i> , <i>Isophyllia rigida</i> , <i>Favia fragum</i> , <i>Dichocoenia stokesii</i> , <i>Meandrina meandrites</i> , <i>Porites astreoides</i>	9	10	26	6	408	136
Sub-massive or encrusting: <i>Agaricia agaricites</i> , <i>S. radians</i> , <i>Stephanocoenia intersepta</i>	3	11	14	3	121	254
Digitates: <i>Porites porites</i> , <i>P. furcata</i> , <i>P. divaricata</i>	2	3	0	3	49	50
Foliaceous: <i>Agaricia fragilis</i> , <i>A. humilis</i> , <i>A. tenuifolia</i> , <i>A. lamarcki</i> , <i>Leptoseris cucullata</i> , <i>Mycetophyllia lamarckiana</i>	1	7	0	5	53	34
